

Rugged Computer – reliable and ruggedized PCs

Welcome to noax Technologies - Your provider of rugged industrial computers

noax Technologies sets the standards for rugged PC and industrial touch-screen computers that are specially designed for hygienic and harsh environments. The noax rugged computers have proven their reliable operation under daily shock, vibration, moisture, water, oil and dust and feature a safety standard of IP65 (NEMA 4) and up to IP69K (NEMA 6). Built with a completely sealed design, the high-tech components inside each rugged PC come equipped with bright TFT displays and resistive analog industrial touch-screens. The all-in-one proprietary motherboard from noax allows for greater efficiency. Above all, noax Technologies' main focus is the reliability and quality of each rugged industrial computer.

The challenge of managing and communicating data across different areas of your company is made simple because the noax rugged PC works with real-time processes and allows for easy networking. Companies in automation, food processing, pharmaceutical, logistics and other manufacturing plants have seen an unparalleled return on investment from the use of noax rugged industrial computers because of their longevity and high performance technology. The ease of integration into existing IT framework and compatibility with all conventional hardware and software systems makes noax rugged PCs an effortless solution.

With over 20 years experience, noax Technologies uses the highest quality components and accessories to ensure reliability. The ability to upgrade as needed enhances the versatility of a noax rugged computer. Let us help you discover a solution for your ruggedized PC needs!
